BILLING CODE 7515-01-M

NUCLEAR REGULATORY COMMISSION

[Docket No. 50-416]

Entergy Operations, Inc., System Energy Resources, Inc., South Mississippi Electric Power Association, Mississippi Power & Light Company; Grand Gulf Nuclear Station, Unit 1, Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. NPF-29, issued to Entergy Operations, Inc. (the licensee), for operation of the Grand Gulf Nuclear Station, Unit 1, (GGNS), located in Claiborne County, Mississippi.

Environmental Assessment

Identification of the Proposed Action

The proposed action would revise the operating license and the antitrust conditions of the license to account for the change in name of Mississippi Power & Light Company (MP&L) to Entergy Mississippi, Inc. The proposed action is in accordance with the licensee's application for amendment dated May 6, 1996.

The Need for the Proposed Action

The proposed action is needed because the name of Mississippi Power & Light (MP&L) will be changed to Entergy Mississippi, Inc. The licensee has stated that this is only a name

change, and the corporate existence continues uninterrupted and all legal characteristics remain the same. There is no change in the state of incorporation, registered agent, registered office, directors, officers, rights or liabilities of the company. Nor is there a change in the function of the Company or the way in which it does business. MP&L's financial responsibility for GGNS and its sources of funds to support the facility will remain the same. Further, this name change does not impact the existing ownership of GGNS or the existing entitlement to power and will not alter the existing antitrust license conditions applicable to MP&L or MP&L's ability to comply with these conditions or with any of its other obligations or responsibilities under the operating license for GGNS.

The licensee also stated that the company, Entergy Mississippi, Inc., will still own all of the same assets as did MP&L, serve the same customers, and will continue all the existing obligations and commitments. There is also no change in the management or the procedures that operate GGNS. The financial responsibility for GGNS and the funds to support the facility will remain the same.

The licensee further stated that the name change is being made to improve customer identification by establishing a consistent, well recognized name, "Entergy", for the region that the licensee serves.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed action and concludes that the change in company name will have no effect on the radiological and nonradiological operation of the plant.

The change will not increase the probability or consequences of any accidents, no changes are being made in the types of any effluents that may be released offsite from the plant, and there is no significant increase in the allowable individual or cumulative occupational radiation exposure at the plant. Accordingly, the Commission concludes that there are no significant radiological environmental impacts associated with the proposed action.

With regard to potential nonradiological impacts, the proposed action does not involve features located entirely within the restricted area as defined in 10 CFR Part 20. It does not affect nonradiological plant effluents and has no other environmental impact. Accordingly, the Commission concludes that there are no significant

nonradiological environmental impacts associated with the proposed action.

Alternatives to the Proposed Action

Since the Commission has concluded there is no measurable environmental impact associated with the proposed action, any alternatives with equal or greater environmental impact need not be evaluated. As an alternative to the proposed action, the staff considered denial of the proposed action. Denial of the application would result in no change in current environmental impacts. The environmental impacts of the proposed action and the alternative action are similar.

Alternative Use of Resources

This action does not involve the use of any resources not previously considered in the Final Environmental Statement for GGNS.

Agencies and Persons Consulted

In accordance with its stated policy, on June 10, 1996, the staff consulted with the Mississippi State official, Robert Goff of the Division of Radiological Health, regarding the environmental impact of the proposed action. The State official had no comments.

Finding of No Significant Impact

Based upon the environmental assessment, the Commission concludes that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the Commission has determined not to prepare an environmental impact statement for the proposed action.

For further details with respect to the proposed action, see the licensee's letter dated May 6, 1996, which is available for public inspection at the Commission's Public Document Room, The Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document room located at the Judge George W. Armstrong Library, 220 S. Commerce Street, Natchez, Mississippi 39120.

Dated at Rockville, Maryland, this 2nd day of July, 1996.

For the Nuclear Regulatory Commission.

Jack N. Donohew,

Senior Project Manager, Project Directorate IV-1, Division of Reactor Projects III/IV, Office of Nuclear Reactor Regulation.
